*\* 2 years or 2000 working hours whatever comes first.*

In the compaction business, the name Dynapac equals quality. Desert heat, or the icy winds of Siberia won't make any difference. The CA rollers just go on and on and on...

Dynapac CA rollers are favorites in the compaction business. Conditions are both rough and tough, and to prevent excessive wear and tear, an important detail is the filter capacity – for the air inlet, for the fuel and for the hydraulics.

Oversized capacity gives you good margins for effective maintenance.

We know it - a machine standing still doesn't make any money.

The CA rollers' track record of world-class uptime has a logical explanation. Daily maintenance is swift and easy to carry out and service intervals are long.

Uncomplicated and user-friendly operation is important. Different operators with varying skills and experience, require simple and reliable man-machine communication. On Dynapac CA rollers, the controls are logical and all relevant information is presented directly on the dashboard.

So, even with a new operator the machine will be up and running in no time.
