Develop your people – Develop your business

Efficient and sustainable road construction does not happen by itself. It is often a rather complicated process where the combination of choosing the right machines, the right materials and the right methods is crucial when it comes to achieving good and lasting results.

In order to make things right from the start, competent and well trained people is a must. Knowing the road machinery and how it is operated is equally important as maintaining and servicing the equipment in a thorough and consistent way.

At Dynapac, we are experts in road construction since 1934. Our long term commitment to develop efficient, high quality products for compaction, paving and milling is based on a solid foundation of research, tests and practical experience from all kinds of applications.

This training calendar reflects our offering of courses. In the program there is a good mix of theoretical knowledge about materials and applica-

tions and practical, hands-on tests in realistic work situations.

Our trainers have long experience from their specific fields of competence, and during the trainings, they are there to help you make optimal use of your Dynapac equipment in the most cost-efficient way. We are confident that you will find our training courses well worth the time and effort.

In the Dynapac Training Calendar of 2011, we have gathered all scheduled training courses offered during this year. On top of this, we offer customized training courses, either at one of our Campus academies, or at a location chosen by you.

To join one of our courses or to get more information, please get in touch with the contact persons stated for each training. Or contact our global training coordinator Anna von Braun by phone +46 (0)70 869 83 32 or by email:

anna.von.braun@se.atlascopco.com

Dynapac Campus Train the Trainer Concept

The Dynapac Campus train the trainer concept is developed in order to maximize your investment.

At the Campuses in Sweden and Germany you can become authorized to train others after having successfully passed the Dynapac Campus train the trainer exam.

Dynapac Campus Sweden, Karlskrona

– *Asphalt and Soil Rollers*

- Product and Application
- Service and Operator

Dynapac Campus Germany, Wardenburg

– *Pavers and Planers*

- Product and Application
- Service and Operator

Dynapac Campus Train the Trainer Courses

Dynapac Competence Center

Application Specialist Program

We offer a customized, three week application specialist program in english, for selected participants active in application support. The program comprises both theoretical and practical with focus on deepening the knowledge on soil and asphalt application, equipment recommendations and problem solving.

The participant will be able to support sales staff and customers in application related issues after completion of the program.

Pre-qualification:

Participation in application and product training or similar professional experience.

Location:

Split between Wardenburg and Karlskrona.

For further information, please contact
Fredrik Åkesson, fredrik.akesson@dynapac.com,
+46 455 306095

Program information

Course schedules

Start, duration and locations of the trainings are indicated in the training calendar. Detailed course information will be given after registration or can be obtained by the organizers. The training calendar may be subject to changes without prior notice.

Registration

Registration should be done 6 weeks prior to training start. Please sign up early due to limited capacity. To register, send an email to local training organizers as stated in this calendar.

Seminars and customized trainings

Knowledge seminars and customized training courses can be organized on requests. For more information about our customized trainings, please contact global training coordinator Anna von Braun.

Fees and expenses

Travel and hotel expenses are paid by each participant. Scheduled trainings are free of charge if nothing else is stated. Quotes for customized trainings will be given on request. Information about training fees are given by local training organizers.

Material and certification

All course participants receive training material in paper or Dvd format. Students must complete entire course to receive certification and diploma. Early departures should be avoided.

Safety and protection

All participants will receive protective clothing, if needed. Safety regulations must be obeyed at all times.

Feedback and follow up

To further improve training content and quality, participants will be asked to evaluate each training. We will add all participants to our student register and you will get continuous information about new trainings, seminars and events.
